About Me

Passionate **Full-Stack Developer** with hands-on experience building responsive web applications and scalable REST APIs. Currently contributing at **Helixz Solutions**, where I work across the stack using **Next.js**, **Spring Boot**, and **SQL** to deliver real-world solutions. I'm driven by a genuine love for problem-solving. I enjoy breaking down complex challenges and engineering clean, maintainable code that makes a difference.

I collaborate well in team environments, value clear communication, and bring a disciplined, detail-oriented approach to every project. Always eager to explore new technologies and grow as a developer, I'm actively looking to contribute meaningfully to a forward-thinking team.

Work Experience

Full-Stack Developer Intern — Helixz Solutions 2025 – Present

Contributing to real-world Next.js projects within a professional team environment. Over 6+ months I have grown significantly as a developer strengthening my coding principles, collaborating closely with teammates, and gaining firsthand experience of how a software company operates end-to-end.

- Built and maintained features in production-level Next.js applications, writing clean and scalable code.
- Developed skills in AI-assisted development, leveraging coding tools to improve productivity and output quality.
- Performed bug fixing and debugging across the codebase, improving application stability and performance.
- Participated in post-development testing to ensure application reliability before delivery.
- Gained experience in client communication and translating requirements into technical solutions.
- Strengthened team collaboration and communication skills within an agile, professional work environment.

Audio Operator — Power House Ltd. (TV Derana) 2020 – 2025

Skilled Audio Operator with 5+ years of experience in live broadcast mixing, audio troubleshooting, and studio/remote productions using Analog & Digital consoles.

Education

Bachelor of Information Technology (BIT) — University of Colombo 2024 – Present

Currently in the second year, having completed a strong first year covering core computing fundamentals, object-oriented programming, data structures & algorithms, computer networking, and professional communication. This academic foundation directly supports my practical development work.

ICD Developer Programme — iCET 2024 – 2025

Completed a one-year industry-focused developer programme bridging academic knowledge with real-world software engineering practice. Gained hands-on exposure to professional tools, frameworks, and workflows including React and Next.js.

Certifications

- [Kubernetes For Absolute Beginners](#) 2026
- [Linux For Absolute Beginners](#) 2026
- [Docker For Absolute Beginners](#) 2026
- [University of Moratuwa — Web Design for Beginners, Python for Beginners](#) 2024

Tech Stack

Languages: Java, JavaScript, TypeScript, HTML, Python

Frameworks & Libraries: Spring Boot, Electron, JavaFX, JPA, Hibernate, Tailwind CSS, Bootstrap

Database: MySQL, SQLite

Learning: Nextjs, React

Tools: IntelliJ IDEA, Webstorm, Datagrip, VS Code, Git/GitHub, Figma, Postman, MySQL Workbench, Swagger

Projects

ReconcileX — Reconciliation Automation Tool

Apr 2026 – Present

- Built a cross-platform desktop application for advanced reconciliation automation, enabling reliable and scalable comparison of financial, business, and operational data.
- **Key Features:** Automated data upload and matching, customizable reconciliation rules engine, result visualization with clear reports, error identification, and step-by-step audit trails.
- **Technologies:** TypeScript, JavaScript, Electron, SQLite
-  [GitHub](#)

BusEase Ticketing System (Full-Stack)

Aug 2025

- Designed and implemented a full-stack, three-actor web application to centralise bus ticket purchasing and route management for commuters and operators.
- **Core Functionality:** Browse routes, book tickets with seat selection, view booking history, and submit service ratings.
- **Technologies:** React with TypeScript (Frontend), Spring Boot (Backend), MySQL (Database)
- **Repositories:**  [Frontend](#)  [Backend](#)

Clothify Store POS System

July 2025

- Designed and implemented a JavaFX desktop application for clothing store management.
- **Features:** Product management, inventory tracking, sales processing, customer management, reports.
- **Technologies:** JavaFX, MySQL, Scene Builder, Google Guice
-  [GitHub](#)

MOS Burger Ordering System

- Developed a full-stack system for burger shop operations.
- **Features:** Menu management, order placement, customer records, and report generation.
- **Technologies:** Spring Boot (Backend), HTML/CSS/JS (Frontend), Hibernate, ORM
-  [GitHub](#)
